# Blockchain & Crypto Currency Generation Assets Platform.

Blockchain Technology does not rely on additional third-party management agencies or hardware facilities, and there is no central control. Except for the self-contained blockchain itself, through distributed accounting and storage, each node realizes information self-verification, transmission and management. Decentralization is the most prominent and essential feature of blockchain.

<https://micrypto.co>

# 100% DECENTRALIZED SYSTEM

Instant Transactions to Your wallet

Blockchain Technology & Decentralization

No Admin

Decentralized

100% Safe & Secure

# Blockchain & Crypto Currency Generation Assets Platform.

- ☐ Decentralized entirely No owner, No Admin, No hierarchy system And No back office.
- ☐ Fully Automatic, No human control
- ☐ 100 Percent openness each transaction is verifiable.
- ☐ Not Edit & Switch Plans & Rules Cannot Be Modified.
- ☐ Scams proof that no one can steal our money. Blockchain Cannot Be Stopped by any Government of the world.
- ☐ Simple UI and anyone can do this using his/her smartphone, laptop or PC.

## BORDERLESS

Cryptocurrency is making waves in the advocacy for decentralization within the financial industry, providing solutions for cross-border transactions and transparent, immutable data via blockchain technology.

## TRUSTLESS

"Trustless" means that you don't have to trust a third party : a bank , a person , or any intermediary that could operate between you and your cryptocurrency transactions or holdings .

## ENDLESS

All financial transactions on the MI CRYPTO platform are carried out instantly in automatic Mode on Blockchain . If you say that something is endless , you mean that it is very large or list for a very long time , and it seems as it will never stop .

@MICRYPTOCOMMUNITY

# Smart Contract

Smart contracts help you exchange property, shares, or anything of value in a transparent, conflict-free way

A smart contract, like any contract, establishes the terms of an agreement. But unlike a traditional contract, a smart contract terms are executed as code running on a blockchain like Ethereum. Smart contracts allow developers to build apps that take advantage of blockchain security, reliability, and Peer accessibility while offering sophisticated peer to functionality everything from loans and insurance to logistics and gaming.

# MI CRYPTO MATHEMATICAL MODEL

## TRUST SINCERITY AND FUTURE

A smart contract, like any contract, establishes the terms of an agreement MI CRYPTO blockchain is a completely decentralized, open and transparent data, fair and just system for global. After the most rigorous mathematical model deduction, it has the most rigorous control model + market operation mechanism + blockchain technology and is committed to building the world's first blockchain decentralized split platform. This is a subversive and innovative system that can bring huge benefits to users around the world. This is an excellent opportunity to achieve financial freedom together. The future has arrived, and we are looking forward to walk with you!

<https://micrypto.co>

# MI CRYPTO

**MI CRYPTO is an Decentralized Smart Contract based, which means a shared, immutable ledger that facilitates the process of recording transactions and tracking assets in a business network.**

**No one can change or edit any data or transactions. The Developer also can't withdraw the balance from your Smart Contract, even they can't edit anything too. Only you can withdraw.**

<https://micrypto.co>

# What is Polygon Blockchain?

Polygon is a “layer two” or “sidechain” scaling solution that runs alongside the Ethereum blockchain — allowing for speedy transactions and low fees. MATIC is the network’s native cryptocurrency, which is used for fees, staking, and more. You can buy or sell MATIC via exchanges like Coinbase. Polygon, which is a “Layer 2” scaling solution (or “sidechain”) that’s emerged to provide faster transactions and lower costs for users. It acts as a speedy parallel blockchain running alongside the main Ethereum blockchain. To use it, you can “bridge” some of your crypto over to Polygon, and then interact with a wide range of popular crypto apps that were once exclusive to the main Ethereum blockchain. Currently, Ethereum can process 14 transactions per second (TPS)—while Polygon achieves speeds of up to 7,000 TPS. This makes everything built on the blockchain much cheaper and quicker, like an HOV lane on the highway. In the near future, experts anticipate that Ethereum will accelerate its TPS after its long-anticipated network upgrade in September 2022. But even after the Merge, Polygon’s lower fees should still attract developers and help the crypto maintain its narrative.

**Note:** MI CRYPTO system support to Polygon Matic only

<https://micrypto.co>

# HOW TO PARTICIPATE

## Wallet

Create a wallet and fund it with Polygon Matic (to pay transaction fees). MI CRYPTO works with MetaMask, Trust Wallet and Token Pocket.

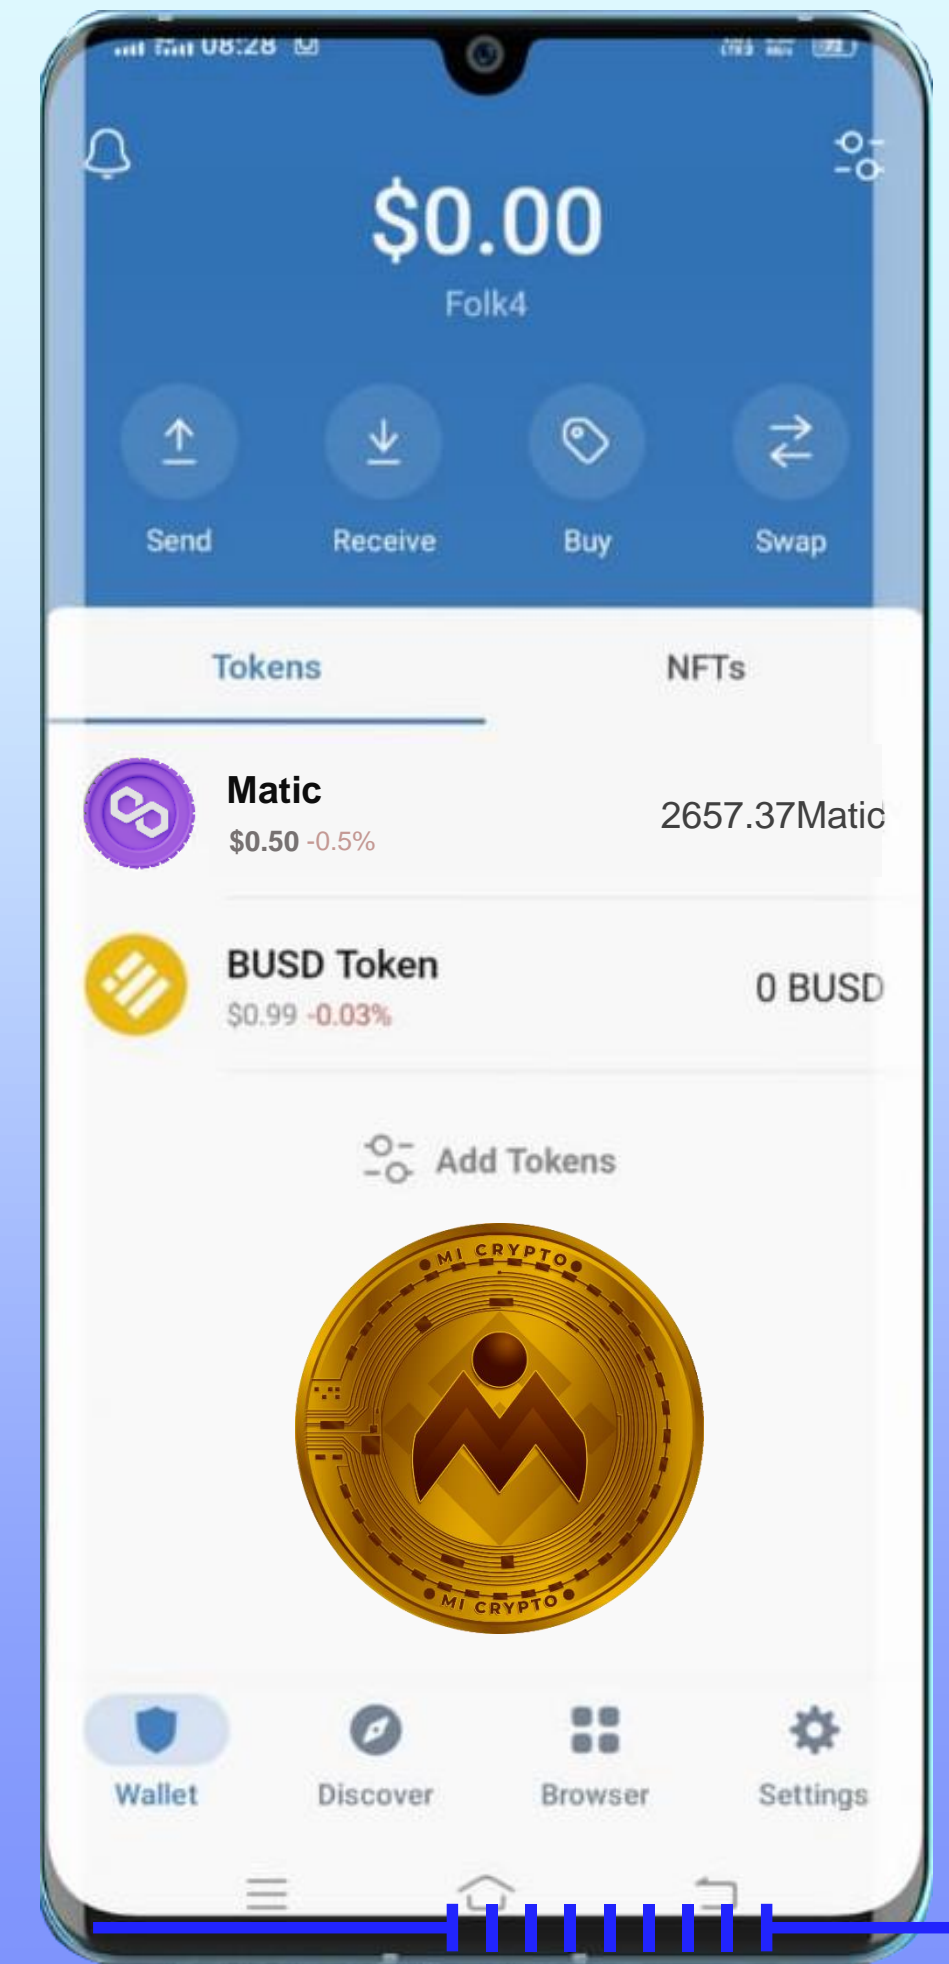

## Register

Register on the site. If someone invited you, use their referral link. Check that your up-line is correct. Please Insure that you have selected polygon network.

## Income

Activate levels in MI CRYPTO systems to increase your income. To achieve the income, 1 direct will be required.
